

GREEN BUILDING CONSTRUCTION

At Bureau Veritas, we assist our clients around the world in achieving their sustainable goals and enhancing their environmental and energy performance along the buildings life-cycle.

Sustainable design

We support our clients in the sustainable design of their construction or refurbishment projects, helping them make correct decisions to achieve the sustainable goals.

Green certifications

We assist our clients in obtaining various green labels and certifications through a tailored approach using a combination of international standards.

Indoor environment

We provide a full range of technical support and specific expertise, including life-cycle assessment, energy and/or lighting modeling, acoustics modeling, well-being, water and air measurements, and continuous construction site monitoring.

Project certifications

We provide our clients with comprehensive services to achieve their projects certification, from pre-assessment and feasibility to design coordination and review to construction monitoring to commissioning and submission.

Achieving Net Zero

We offer energy management solutions to enable facility owners and managers to minimize their future operating costs, reduce CO₂ emissions, forge a path toward Net Zero, and ensure their projects are socially and environmentally compliant.
