INTEGRATED MANAGEMENT SYSTEM

COURSE CONTENT

Since the entry in force, on 1st July 1998, of the International Safety Management (ISM) Code and the proliferation of new codes and new standards in the shipping industry, the need for a simplification of the company management system emerged and was recognized.

Your company may have separate management systems as Heath & Safety, Environment, Quality, Security, etc.

Base on the fact that a number of elements are common to all codes and standards they can logically be combined in only one management system.

The aim of the integrated system is to streamline processes and avoid duplication in respect of the requirements of each individual code and standard in order to maintain a high level of credibility and effectiveness.

My company is certified ISM Code, can we add ISO 9001 Std. or 1S0 14000 Std. in our system?
If yes, how can we do it?
Is it possible to integrate ISPS Code inside the new system?
What part should be visible and what part should be kept confidential for security reasons?
How can we plan and execute internal audits?
Is it possible to have an integrated system certified during the same external audit?
How to prepare the review of the company management system?
What happen if the system fails to meet the requirements of one code or standard?
In that case, can we maintain the certification for those that are satisfactory?

This training will answer to these questions with an aim for simplification and continuous improvement.

KEY LEARNING AREAS

- The requirements of the ISO 9001 Std.
- The requirements of ISO 14001 Std
- The requirements of OHSA 18001 Std.
- The common requirements of those Standards
